

Image Redaction Solutions for Kofax Ascent Capture®

Keeping Confidential Information ... Confidential

With the pressing need for public access to digital records, privacy is becoming a crucial issue amongst many organizations. By using a digital redaction system, incoming documents can be scanned, redacted, and sent to public archives through a complete digital workflow. Confidential information can be protected, and individuals can feel safe that their personal information is being protected.

ImageTech has developed a robust redaction module that fully integrates with the world's leading document capture platform, Kofax Ascent Capture. Using Ascent Capture, organizations can scan and transform their paper documents into electronic content. In addition, organizations can setup redaction on those same documents to ensure confidentiality of protected information.

This solution facilitates the protection of confidential information and compliance with the *Freedom of Information Act (FOIA)*, the *Openness in Government Act of 2005*, the *Privacy Act*, and the *Health Insurance Portability and Accountability Act (HIPAA)*, among others.

The ImageTech Redaction Solution:

- Ensures Privacy and Confidentiality of Information
- Easy to Use Interface for End Users
- Redact Selected Documents and/or Batches
- Easily integrates with Kofax Ascent Capture

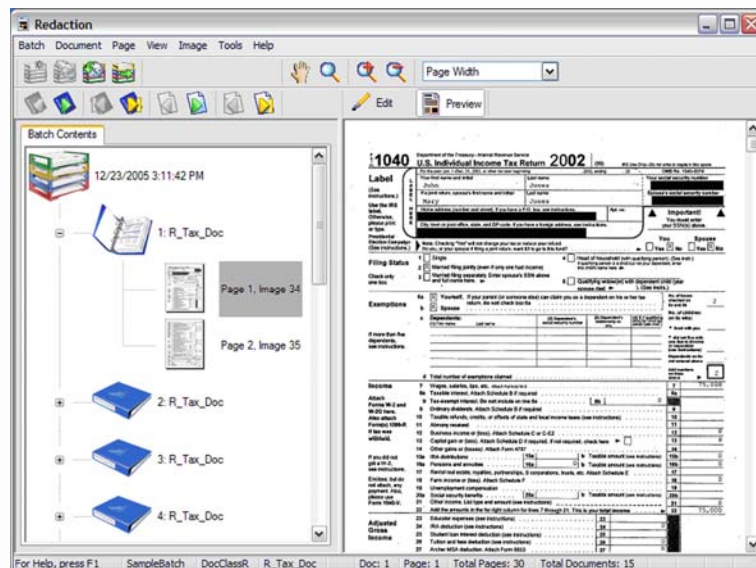

Who Can Benefit

- Federal Government Agencies
- State and Local Government Agencies
- Health Care Providers
- Law Firms and Litigation Support Companies
- Pharmaceutical Companies
- Corporate Human Resource Departments
- Insurance and Financial Services Companies

Ensure that your private information is redacted the first time, every time.

Three Levels of Redaction Solutions

Ad-hoc Redaction

Easily incorporate ad-hoc redaction into your Kofax environment by adding the ImageTech Ad-Hoc Redaction Module. This module enables organizations to jumpstart their redaction needs quickly. Once enabled, this module can allow users to identify documents that require redaction. Users can then simply draw boxes around the words and phrases that require redaction. Once the module is closed, redactions are made permanent. Organizations do have the ability to release the redacted document and the original for maximum flexibility.

Automated Structured Document Redaction

This solution is designed for organizations that require redaction on any kind of structured form, such as Order Forms, Court Documents, Applications, etc. With this solution in place, organizations can identify the areas on the documents where confidential information exists including Social Security Numbers, Addresses, Birth Dates, Names, Credit Card Numbers, and more. Leveraging the power of Kofax, this solution automatically redacts these areas without any user intervention required.

Automated Unstructured Document Redaction

Designed for ultimate flexibility, the ImageTech Automated Unstructured Document Redaction solution leverages the power of Kofax's Indicius software to redact information from semi-structured and unstructured documents. This solution is ideal for public institutions and organizations that require redaction of confidential information on any document that may come in to the organization regardless of format. This solution allows organizations to identify certain words, phrases, and patterns to be redacted regardless of the format of the document or the location that they may be found.
