

FileNet P8 Content Manager Connector for eCopy™ ShareScan OP®

ImageTech Systems is pleased to announce the IBM FileNet P8 Content Manager Connector for eCopy ShareScan OP, allowing paper documents to be scanned at a digital copier or document scanner and sent to the FileNet P8 Content Manager Repository.

With the FileNet P8 Content Manager Connector for eCopy ShareScan OP, hard copy documents are quickly converted into digital files to be stored in Content Manager Document Classes. Indexing information can be entered at the digital copier or scanner using eCopy ShareScan OP. This enables the document to be sent directly to the specified location within the FileNet P8 Content Manager system for storage, where it is immediately available for retrieval by authorized FileNet users.

Now, FileNet P8 Content Manager users can easily include paper documents in their digital workflows and supporting document lifecycle management processes. The FileNet P8 Content Manager Connector for eCopy ShareScan OP is dynamically integrated with the FileNet P8 Content Manager catalog, assuring customers that eCopy-created image files will be stored, indexed, and managed consistent with their existing content management procedures.

Send Your Documents to FileNet P8 from an MFP using eCopy.

Benefits

Preview Function

- Make certain the document you are storing has been scanned properly

Low Cost of Ownership

- Leverage existing document management system investment
- Leverage existing MFP devices for distributed document capture.
- Leverage knowledge worker expertise with source documents
- Speed up capture process/turn-around

Enhanced User Experience

- Tight Integration with FileNet P8 Content Manager
 - Reflect unique user permissions and preferences
 - Consistent user interface and workflow reduces training time
 - Support for all eCopy supported devices

Security

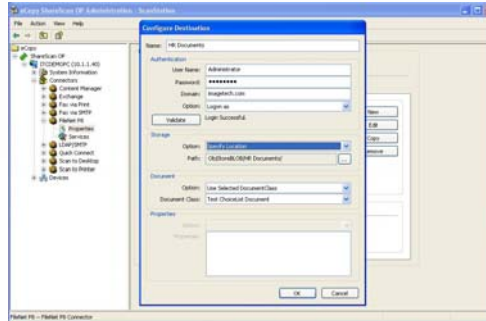

- Leverage the security profiles inherent to your FileNet P8 Content Manager system
- Validate users at the device
- Create an electronic audit trail

Connector Features

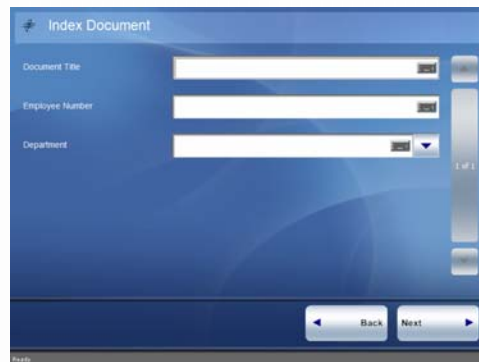

- Supports all eCopy File Types - TIFF, PDF, and CPY (eCopy)
- Type Ahead Search Enabled for Login and Document Class Screens
- Data Validation for Character Length and Type
- Enforcement of FileNet P8 Content Manager Required Fields
- Supports Single Sign-On via ShareScan OP Session Logon
- Support eCopy ShareScan OP Batch Mode
- Supports FileNet P8 Choice Lists

Initial installation and setup take only minutes to complete. Simply identify the object store to store scanned images within FileNet P8 Content Manager. Additionally, a system administrator can specify a document class or allow users to make that determination at scan time.

Destinations are presented to users through the Connector User Interface. A destination is a set of preconfigured options that can be exposed to the users. These can represent departments, groups of users, or specific kinds of documents.

Users can then complete the transmission by filling out appropriate index fields. The Connector will check for valid input such as character length and type, and will also ensure that required fields have been completed.
